

ABSTRACT

A self positioning astragal seal that automatically positions at least one seal at the lower
5 end of an astragal adjacent the threshold sill of a door frame, and prevents drafts at the
vicinity of the lower end of the astragal and the threshold sill, and/or of automatically
positions at least one seal at the upper end of the astragal adjacent the header of the
door frame, and prevent drafts at the vicinity of the header. The self positioning
astragal seal independently positions itself abuttingly adjacent the sill and/or the header
10 when the astragal's bolts are extended from a retracted position to an extended position
and are received by the upper and/or lower apertures in the upper and/or lower portions
of the door frame, is easy to use, install, and can be used with a variety of astragals and
threshold sills, types, sizes, and shapes of threshold sills, doors, and door frames.
